TYPES OF PIGMENT SPOTS AND REASONS FOR THEIR APPEARANCE

Hyperpigmentation is a problem familiar to women of all ages. To successfully combat it, it is important to understand the cause of its occurrence. Here are the most common types of age spots:

- **Freckles, or ephelides.** Their brightness increases during periods of active sun. This is a pretty nice genetic trait and there is no need to fight them
- **Melasma.** These are pigment spots with uneven outlines, provoked by hormonal imbalance and ultraviolet radiation
- **Secondary inflammatory pigment spots.** Occur after acne, wounds and other epidermis damages
- **Age-related pigmentation.** Most often appear on exposed areas of skin under the influence of ultraviolet radiation, due to a decrease in metabolism and hormonal problems

By determining the type of pigment spot, you can track the cause of its occurrence, and therefore prevent its reappearance. And to combat existing hyperpigmentation, use the Whitening series - it functions effectively with any type of age spots. And don't forget that regular use is the key to success!

TXA Peeling 30 ml **12007**

- Effectively eliminate age spots and age-related skin changes
- Gently exfoliate skin, even out its microrelief and add radiance
- Stimulate production of elastin, collagen and hyaluronic acid

Tranexamic Acid (TXA) — one of the most effective whitening components. Suppresses melanin synthesis, helps eliminate age spots and prevents appearance of new ones

Complex of AHA acids — glycolic and lactic – stimulate skin renewal, making it softer and smoother, fight signs of aging

HOW DO I USE IT?

- Apply a thin layer to clean skin of your face and neck, avoiding area around eyes. Rinse with cool water in 10-20 minutes.
- Use as a course 2 times per week 2-4 weeks depending on intensity of pigmentation.
- When used in spring, summer or during periods of active sun, obligatorily apply the cream with SPF 50 when going outside, at other times - cream with SPF not lower than 15.

Cream With Instant Brightening Effect SPF 15 50 ml 12035

Instantly improves
skin appearance

Mineral particles visually
brighten skin, mattify it
and create the lightest
toning coating

**Organic and
non-organic filters**
block UVA-, UVB-
and HEV-rays

Vitamin C provides
antioxidant protection

Aquaftem® Complex
delivers oxygen from
the air to deep layers
of your skin

Whitening Cream SPF 15 50 ml 12034

Effectively brightens and
evens out skin tone

Tetrahydrocurcumin
active molecule from
turmeric roots, provides
whitening and
antioxidant effect

Niacinamide brightens
and moisturizes skin,
stimulates synthesis
of collagen and ceramides,
strengthening natural
protective barrier

Aquaftem® Complex
saturates skin with
oxygen
