FABERLIC LAB INNOVATION

Collagen is the protein of youth: it is what makes skin firm and tight. After the age of 20, the skin begins to lose collagen rapidly, and by the age of 40 it becomes especially noticeable. But Collagen O₂ solves this problem by restoring its synthesis!

We took **nanomolecules of collagen** (0.67 kDa*) that can penetrate the deep layers of the skin and

combined them with an **oxygen complex** that delivers them to collagen fibers. This is how the production of the skin's own youth protein is triggered. In addition, we have added **large and medium-sized molecules** (12-250 kDa*) of living collagen types I and III: they act on the surface and in the middle layers of the skin, strengthening its framework.

Large and medium-sized molecules of living collagen (12-250 kDa*) act on the surface and in the middle layers of the dermis.

Collagen nanomolecules (0.67 kDa*) penetrate into the deep layers, where they activate their own collagen production, thanks to the oxygen complex.
